

Machine Learning Engineer

Nova Analytics | Karachi, Pakistan (Hybrid) | Full-time

ABOUT THE ROLE

Nova Analytics is looking for a Machine Learning Engineer to help design, build, and deploy ML models that power our client-facing analytics products. You'll work across the full lifecycle: data preparation, model development, evaluation, and production deployment.

REQUIREMENTS

- BS or MS in Computer Science, Data Science, or a related field.
- 2+ years of hands-on experience building machine learning models.
- Strong proficiency in Python.
- Solid working knowledge of SQL and relational databases.
- Hands-on experience with TensorFlow (or an equivalent deep learning framework).
- Practical experience with NLP and/or Computer Vision projects.
- Experience containerizing applications with Docker.
- Experience deploying or running models on Microsoft Azure.
- Strong written and verbal communication skills.

NICE TO HAVE

- Experience with CI/CD pipelines for ML.
- Familiarity with MLOps tooling (MLflow, Kubeflow, or similar).
- Exposure to Kubernetes.

WHAT YOU'LL DO

- Build, train, and evaluate ML models for real business problems.
- Containerize and deploy models to Azure-hosted production environments.
- Collaborate with data engineers and product managers to ship features end-to-end.
- Monitor deployed models and iterate based on performance data.
