

Web Developer

Nova Analytics | Karachi, Pakistan (Hybrid) | Full-time

ABOUT THE ROLE

Nova Analytics is looking for a Web Developer to help design, build, and maintain high-performance web applications and client-facing dashboards. You'll work across the full software development lifecycle: frontend user interfaces, API integrations, database management, and cloud deployment.

REQUIREMENTS

- BS or MS in Computer Science, Software Engineering, or a related field.
- 2+ years of hands-on experience building web applications.
- Strong proficiency in HTML5, CSS3, JavaScript (ES6+), and TypeScript.
- Solid working knowledge of modern frontend frameworks (e.g., React, Next.js, or Vue.js).
- Practical experience with backend development using Node.js, Python, or PHP.
- Solid working knowledge of SQL and relational databases.
- Practical experience consuming and building RESTful APIs or GraphQL.
- Experience containerizing web applications with Docker.
- Experience deploying web applications on cloud platforms like Microsoft Azure or Vercel.
- Strong written and verbal communication skills.

NICE TO HAVE

- Experience with CI/CD pipelines for automated testing and deployment.
- Familiarity with state management libraries (Redux, Zustand, or Pinia).
- Exposure to cloud hosting environments and serverless architectures.

WHAT YOU'LL DO

- Build, test, and maintain responsive web interfaces and core application features.
- Containerize and deploy web applications to production environments.
- Collaborate with data engineers, UI/UX designers, and product managers to ship features end-to-end.
- Monitor deployed applications and optimize performance based on user and system data.
